I have checked this question, but it seems like using a custom task is not applicable for my requirement. Can anyone help me to solve this issue? A: In my case, the solution was to add compile project(path:...) within the gradle build file: compile project(':libs:myLibrary') This will compile the library and copy all the jar files to a project-path/libs directory. , quality assurance, client focus, cost-reduction and a solid logistics backbone.
