He contracted programmer Gary Kildall, who subsequently became the company's president and CEO. Kildall wrote the initial version of the program for a newly released IBM PC running MS-DOS, while he was still working on another project. The first version of AutoCAD, known as DesignCAD, was released in December 1982. Kildall originally envisioned his company's software as having the same characteristics of a drafting or drafting machine. However, he was pleasantly surprised to find that most CAD users were actually architects, draftsmen and engineers who simply wanted to modify or improve their design work instead of creating original artwork. Thus, the first versions of AutoCAD focused more on making a design easier and more efficient to create than on faithfully reproducing a drawing. In addition to programs for creating the standard 2D drafting or architectural drawings, AutoCAD supports the creation of the many other kinds of 2D and 3D drawing, technical illustrations, and presentation documents and graphics that architects and other graphic designers might need. With AutoCAD, designers can view their work on a wide range of computer platforms, ranging from ultra-portable devices such as tablet computers and smartphones to large mainframe-class computers. AutoCAD has since been released on several computer operating systems, including DOS, MS-DOS, Windows, and Unix. Initially, software for AutoCAD was provided only to the first 20,000 customers. A license was sold for $50,000. The company's first public demonstration of AutoCAD took place in San Francisco in 1983 at the "Drafting Symposium," a two-day gathering for architects and engineers. At that time, AutoCAD was a somewhat buggy and slow product. By the time version 1.0 of AutoCAD was ready for release, around 1983, the company was experiencing significant growth. Its revenues were rising rapidly, it was opening new offices in Germany and Japan, and it had a software development team of around 100 people. To accommodate the growing popularity of AutoCAD and to meet the new demand, Autodesk decided to move its operations to the company's new headquarters, in San Rafael, California

Software and services AutoCAD is available for Microsoft Windows, macOS, iOS, Android, and Linux. A beta version was released for Apple's Mac OS X in 1999, and was eventually sold for macOS, as well as for iOS, Google's Android operating system, and Windows RT (but not Windows 10), and is the only version of AutoCAD that supports Windows XP. AutoCAD LT 2019, released in November 2019, is the first version of the product available as a stand-alone Mac and Windows application. AutoCAD has an online educational portal at acad.autodesk.com. Community The most active online AutoCAD community is at CADtalk (formerly called AutoCAD Users Group) at caddev.net. The company supports the CADtalk community through monthly educational webinars on various topics. In 2017, Autodesk launched Autodesk Forums and the company expects to provide quarterly updates in 2019. Customization The most advanced customization option for AutoCAD is ObjectARX, a library developed by the Autodesk R&D group. ObjectARX allows AutoCAD to be customized by C++ developers. It includes customization of drawing symbols, dynamic creation of drawing objects based on user-defined settings, and can be used with other applications. Several third-party products have been created using ObjectARX. History AutoCAD 2000 AutoCAD 2000 was first released on September 21, 2000 as a beta version of AutoCAD. AutoCAD 2000 was originally designed to bring AutoCAD into the 21st century. Its features included the following: A completely new native (non-VM) programming language called AutoLisp that was designed for writing AutoCAD extensions and scripts A revised application programming interface (API) called the ObjectARX API that enabled users to easily modify AutoCAD objects and writing extensions A color-coded coordinate system for graphical objects A simplified drawing window A grid display that enabled users to show grids on drawing objects A new default template file format called DST (Dynamic Storage) An ability to open DXF files in the drawing window User-defined keystrokes AutoCAD 2001 AutoCAD 2001 was released on November 28, 2001. It introduced a number of enhancements to the interface and architecture of the application. AutoCAD 2001 included the following enhancements: A new visual layer engine A new a1d647c40b

This article provides a retrospective analysis of the progress of life support system (LSS) patients at the University of Tennessee Children's Hospital Health Center. It is a follow-up study of the last 6 years of experience, when 5 life-threatening conditions were treated by the LSS in the absence of a donor heart. These data were compared with the same retrospective analysis of the last 6 years of experience, before the policy of using the LSS for these patients was established.Scrutiny of the MaxiSCALE™ on the performance of the UltraScale™ High Performance CMOS platform in the complex dynamic networks such as those that may be found in the brain will be of use to designers and researchers working with this technology. An overview of the proposed use of the UltraScale™ High Performance CMOS technology for this work can be found in Carver et al. [1]. This paper reviews some of the theoretical and simulation work that led to the MaxiScale™ microprocessor architecture. It also describes in more detail the design goals that led to the current MaxiScale™ microprocessor architecture. The performance of the MaxiScale™ microprocessor architecture has been evaluated for the real-time applications such as speech and vision processing.RALEIGH, N.C. — The on-line registration period for the 2008 Tour of the PGA Seniors was extended through Jan. 20. On Monday, the PGA of America announced a change to its entry rules for the 2008 Senior PGA Championship — which will be played May 21-26 at TPC at Sawgrass in Ponte Vedra Beach, Fla. The length of the on-line registration period for the tour event was extended to Jan. 20 for those who already have entered their names online and to Jan. 21 for those who plan to register later. The PGA of America said those who have registered on-line will not be notified if they are cut
