Nephelia, a nation known as the Elden Ring. The King who rules the nation is a wise and benevolent king, but even the most dedicated people cannot help but be deceived by the promises of a young corrupt prince. The young prince brings disaster to the Elden Ring, but those who are suspicious of the prince's sinister intentions are ruthlessly hunted down and slaughtered. The survivors are scattered, each trying to escape in order to find a solution. In this end there are those with a deep hatred of the corrupt prince, and those who wish to vanquish the corruption and prevent it from spreading. In addition, there are those who exist out of necessity. Either they have been relegated to a society that worships the prince, or their birthright has been taken from them. The lost children of Nephelia are all in the same desperate condition. □The Creators□ KOBAYASHI Keishi JOURNEY TO BARD'S FIRE. Let's make that happen. - BOOM! STUDIO BOOM! Abstract Two in-process monitoring strategies, laser fluorescence spectroscopy and focused ion beam analysis, were used to monitor the hydrothermal synthesis of  $\text{Na}_3\text{V}_2(\text{MoO}_4)_2\text{O}_3(\text{OH})$  in detail. The results showed that both in-process monitoring strategies can effectively monitor the crystallization process of the target samples and their productivities of hydrothermal synthesis. The as-synthesized samples exhibited a systematic phase transition from  $\text{Na}_3\text{V}_2(\text{MoO}_4)_2\text{O}_3(\text{OH})$  to  $\text{Na}_3\text{V}_2(\text{MoO}_4)_2\text{O}_3(\text{OH})$  with the increase of time, and no secondary phase was detected. It can be found that the fabrication of the  $\text{Na}_3\text{V}_2(\text{MoO}_4)_2\text{O}_3(\text{OH})$  nanorods met a large number of defects and tensile stresses caused by the extrusion process. Energy-dispersive X-ray microanalysis results showed that the high content of oxygen, phosphorous and sodium ions in the as-prepared  $\text{Na}_3\text{V}_2(\text{MoO}_4)_2\text{O}_3(\text{OH})$  is the main reason for its improved properties. In addition, both laser fluorescence spectroscopy and focused ion beam analysis proved the compositional and structural uniformity of  $\text{Na}_3\text{V}_2(\text{MoO}_4)_2\text{O}_3(\text{OH})$  nanorods. An awakening game that combines the two systems of 0.5emux's RPGs, 'ROBLOXd -Roblox Agent' and 'ROBLOXd -Worlds'! What is Robloxd, you ask? Well, it's sort of like a 3D version of a TF2 mod, except it's a lot more open and inviting than the typical video game, and it's free to play! Robloxd is where you can create your own custom games, share them with other gamers, and interact with each other in a massive multiplayer environment! It's a very social community where everyone is welcome, regardless of skill level! Robloxd is technically a sandbox, and a tool to create your own games without having to create them from scratch. With that in mind, the tools that Robloxd provides give you the chance to develop your own ideas into games! However, with that freedom comes a host of new challenges!**
